## Web Information on Biologics used in Advanced Tissue Regeneration

1. **BMP-2: A powerful genetically engineered Growth factor for new Bone formation:**

<http://www.infusebonegraft.com/healthcare-providers/oral-maxillofacial-surgery/important-safety-information/index.htm>

2. **rh-PDGF, a Genetically Engineered Platelet Derived Growth Factor for promoting Tissue Regeneration:** <http://www.infusebonegraft.com/healthcare-providers/oral-maxillofacial-surgery/important-safety-information/index.htm>

3. **Platelet Rich Plasma: obtained from a small amount of the patient's own blood:** [https://en.wikipedia.org/wiki/Platelet-rich\\_plasma](https://en.wikipedia.org/wiki/Platelet-rich_plasma)

4. **Emdogain (Enamel Matrix Derivative Protein): A biologic used for tissue regeneration:** [https://en.wikipedia.org/wiki/Enamel\\_matrix\\_derivative](https://en.wikipedia.org/wiki/Enamel_matrix_derivative)

In selected cases, your surgeon may recommend the use of advanced tissue regeneration products to enhance the outcome and success of your surgery. These recommendation are based on a combination of empirical and scientific data. Please ask your surgeon for explanations. The above captioned web addressed are for your own edification.
